## The New Harkness **Compact+** range

Packaged to provide maximum flexibility for cinemas.

# The **Compact+** range

The new **Compact+** range of screens features Harkness' latest innovation, Smart Flex technology, which meshes the coating with the PVC surface with far greater flexibility.

And as the screen can be more compactly packaged and delivered by standard courier, it reduces shipping costs, with easier handling and greater efficiency, for cinema owners worldwide – with overall savings of up to 85%.

*"This has been a time of great upheaval for us all. But at Harkness, we're committed to helping the cinema industry build back better and in the process reduce its carbon footprint. That's why we developed the new Smart Flex range of superior foldable screens, to provide a highly cost-effective option that reduces the cost of transportation and packaging waste."*

Mark Ashcroft, CEO Harkness Screens

## Introducing screens that puts cinemas first

As we emerge from the pandemic, these remain challenging times for cinemas across the globe. With capacity limits due to social distancing, shorter theatrical windows and increased global logistics costs, keeping theaters of all sizes financially viable and fully operational is essential.

## Leading the industry in every way we can

As the biggest name in cinema screen technology, at Harkness we're committed to doing everything we can to help support the industry just as we have for over 90 years. That's why we've developed the new **Compact+** range - combining the exceptional performance of Harkness screens with our next generation packaging technology.

## Brilliant performance, packed for economy

The **Compact+** range is available incorporating Perlux HiWhite technology, the world's premium projection surface for 2D and active 3D movies. With ultra-wide viewing angles, best-in-class uniformity and superior color and contrast, it remains the industry's leading white gain screen for lamp-based and laser projection.

In early 2022, **Compact+** will also incorporate a brand new polarised screen technology for 3D and 2D presentation.

**Compact+** sets new standards in shipping and installation efficiency.

## Crease-free technology means increased performance

For the new **Compact+** range, our research and development team has developed innovative Smart Flex multi-layer technology with an improved interface which allows the coating to mesh onto the screen surface with far greater degrees of flexibility and bonding. So unlike traditional foldable screens, our **Compact+** range combines reduced creasing with trusted optical performance.

## The story unfolds

What's the real benefit of choosing **Compact+** by Harkness? A significant reduction in shipping and packaging costs by up to 85%, greater efficiency and reduced environmental footprint with a dramatic reduction in packaging waste. **Compact+** screens can typically be delivered faster through standard courier services and once with you, the packaging makes moving the screen through the cinema and in to the auditorium simpler and less costly too.

## Features and Benefits

- Premium foldable Harkness screen surfaces comprising best-in-class technologies
- Compact packaging enabling smoother transport and installation inside an auditorium
- Lower total cost of ownership through reduced packaging and shipping costs.
- Reduced environmental footprint through significant packaging waste reductions and lighter shipping weights.
- A range of gains to suit all theater shapes and sizes, projection systems all with a view to optimising operational, power and consumable costs.

Best-in-class screen technologies

Improved brightness, uniformity and reduced hot-spotting

Premium surfaces for 2D and 3D cinema

Available in gain levels from 1.4 to 2.9 with digital or mini perforations

Compatibility with all projection systems including RGB Laser, Laser Phosphor and Lamp-based technology.

The new **Compact+** screen range, cost effective solutions for cinemas globally.
